

# Asymptotic of twisted Alexander polynomials and hyperbolic volume

L. Benard, J. Dubois, M. Heusener, J. Porti

April 23, 2020

# Introduction

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume.

# Introduction

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume.

Hyperbolic:

$$M \simeq \mathbb{H}^3 / \Gamma$$

# Introduction

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume.

**Hyperbolic:**

$$M \simeq \mathbb{H}^3 / \Gamma$$

Where the holonomy map

$$\rho: \pi_1(M) \xrightarrow{\sim} \Gamma$$

identifies  $\pi_1(M)$  with a discrete subgroup

$$\Gamma \subset (\mathrm{P})\mathrm{SL}_2(\mathbb{C})$$

# Introduction

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume.

**Hyperbolic:**

$$M \simeq \mathbb{H}^3 / \Gamma$$

Where the holonomy map

$$\rho: \pi_1(M) \xrightarrow{\sim} \Gamma$$

identifies  $\pi_1(M)$  with a discrete subgroup

$$\Gamma \subset (\mathrm{P})\mathrm{SL}_2(\mathbb{C})$$

which acts on  $\mathbb{H}^3$  by isometries.

# Hyperbolic manifolds

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume, for instance

Example (The figure-eight knot)

# Hyperbolic manifolds

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We consider  $M$  a hyperbolic 3-manifold of finite volume, for instance

Example (The figure-eight knot)

It follows from Mostow rigidity that the volume of  $M$  is a topological invariant.

# Reidemeister torsion

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

An other topological invariant is the Reidemeister torsion of the pair

$$(M, \rho)$$

# Reidemeister torsion

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

An other topological invariant is the Reidemeister torsion of the pair

$$(M, \rho)$$

where  $M$  is a hyperbolic manifold, and  $\rho: \pi_1(M) \rightarrow \mathrm{SL}_2(\mathbb{C})$  its holonomy.

# Reidemeister torsion

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

An other topological invariant is the Reidemeister torsion of the pair

$$(M, \rho)$$

where  $M$  is a hyperbolic manifold, and  $\rho: \pi_1(M) \rightarrow \mathrm{SL}_2(\mathbb{C})$  its holonomy.

It refines the cohomological information contained in some cellular complex

$$C^0(M, \rho) \xrightarrow{d_0} C^1(M, \rho) \xrightarrow{d_1} C^2(M, \rho) \rightarrow \dots$$

# Reidemeister torsion

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

An other topological invariant is the Reidemeister torsion of the pair

$$(M, \rho)$$

where  $M$  is a hyperbolic manifold, and  $\rho: \pi_1(M) \rightarrow \mathrm{SL}_2(\mathbb{C})$  its holonomy.

It refines the cohomological information contained in some cellular complex

$$C^0(M, \rho) \xrightarrow{d_0} C^1(M, \rho) \xrightarrow{d_1} C^2(M, \rho) \rightarrow \dots$$

It should be thought as the alternating product of the "determinants" of the boundary operators  $d_i$ :

$$\mathrm{tor}(M, \rho) = \prod_i \det(d_i)^{(-1)^i} \in \mathbb{C}^*$$

# Torsion and volume

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first natural (informal) question is the following:

## Question

*Is there a relation between  $\text{tor}(M, \rho)$  and  $\text{Vol}(M)$ ?*

# Torsion and volume

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first natural (informal) question is the following:

## Question

*Is there a relation between  $\text{tor}(M, \rho)$  and  $\text{Vol}(M)$ ?*

We introduce some notation: the  $(n - 1)$ -th symmetric power  $\text{Sym}_{n-1}$  denotes the unique irreducible embedding

$$\text{Sym}_{n-1}: \text{SL}_2(\mathbb{C}) \hookrightarrow \text{SL}_n(\mathbb{C})$$

induced by the isomorphism

$$\text{Sym}_{n-1}(\mathbb{C}^2) \simeq \mathbb{C}^n$$

# Torsion and volume

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first natural (informal) question is the following:

## Question

*Is there a relation between  $\text{tor}(M, \rho)$  and  $\text{Vol}(M)$ ?*

We introduce some notation: the  $(n - 1)$ -th symmetric power  $\text{Sym}_{n-1}$  denotes the unique irreducible embedding

$$\text{Sym}_{n-1}: \text{SL}_2(\mathbb{C}) \hookrightarrow \text{SL}_n(\mathbb{C})$$

induced by the isomorphism

$$\text{Sym}_{n-1}(\mathbb{C}^2) \simeq \mathbb{C}^n$$

For instance

$$\text{Sym}_{n-1} \begin{pmatrix} \lambda & 0 \\ 0 & \lambda^{-1} \end{pmatrix} = \begin{pmatrix} \lambda^{n-1} & & & & \\ & \lambda^{n-3} & & & \\ & & \ddots & & \\ & & & \lambda^{3-n} & \\ & & & & \lambda^{1-n} \end{pmatrix}$$

# Asymptotic of torsions

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Previous question has been answered positively as follows:

Theorem (Müller '12 for the compact case,  
Menal-Ferrer–Porti '14 for the general case)

*Denote by*

$$\rho_n: \pi_1(M) \xrightarrow{\rho} \mathrm{SL}_2(\mathbb{C}) \xrightarrow{\mathrm{Sym}_{n-1}} \mathrm{SL}_n(\mathbb{C})$$

*the  $(n - 1)$  symmetric power of the holonomy representation of a hyperbolic manifold  $M$ . The following holds:*

$$\lim_{n \rightarrow \infty} \frac{\log |\mathrm{tor}(M, \rho_n)|}{n^2} = \frac{\mathrm{Vol}(M)}{4\pi}$$

# Our motivations

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first question it raises, which is our original motivation, is the following.

# Our motivations

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first question it raises, which is our original motivation, is the following.

First recall that the holonomy representation  $\rho$  is part of a moduli space of deformations of geometric structures, **the deformation variety**, or character variety.

# Our motivations

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first question it raises, which is our original motivation, is the following.

First recall that the holonomy representation  $\rho$  is part of a moduli space of deformations of geometric structures, **the deformation variety**, or character variety.

In a few words, despite the holonomy representation corresponds to the unique (thanks to Mostow rigidity) **complete** hyperbolic structure on  $M$ , one can deform this structure into non-complete ones, yielding a moduli space.

# Our motivations

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The first question it raises, which is our original motivation, is the following.

First recall that the holonomy representation  $\rho$  is part of a moduli space of deformations of geometric structures, **the deformation variety**, or character variety.

In a few words, despite the holonomy representation corresponds to the unique (thanks to Mostow rigidity) **complete** hyperbolic structure on  $M$ , one can deform this structure into non-complete ones, yielding a moduli space. Moreover, this character variety is an analytic (even algebraic) variety, equipped with analytic functions

$$\text{tor}: [\varrho] \mapsto \text{tor}(M, \varrho)$$

$$\text{Vol}: [\varrho] \mapsto \text{Vol}(\varrho)$$

with  $\text{Vol}(\rho) = \text{Vol}(M)$  when  $\rho$  is the holonomy.

# Deformation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

A natural question is then:

## Question

*Can we "deform" the statement of Müller and Menal-Ferrer-Porti into:*

$$\lim_{n \rightarrow \infty} \frac{\log |\operatorname{tor}(M, \varrho_n)|}{n^2} = \frac{\operatorname{Vol}(\varrho)}{4\pi}$$

*for any  $\varrho: \pi_1(M) \rightarrow \operatorname{SL}_2(\mathbb{C})$  close to the holonomy representation  $\rho$ ?*

# Deformation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

A natural question is then:

## Question

*Can we "deform" the statement of Müller and Menal-Ferrer-Porti into:*

$$\lim_{n \rightarrow \infty} \frac{\log |\operatorname{tor}(M, \varrho_n)|}{n^2} = \frac{\operatorname{Vol}(\varrho)}{4\pi}$$

*for any  $\varrho: \pi_1(M) \rightarrow \operatorname{SL}_2(\mathbb{C})$  close to the holonomy representation  $\rho$ ?*

It turns out that most of the techniques of their proofs fall down when  $\varrho$  is not the holonomy representation.

# A more affordable first step

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

To begin with, we consider the following more simple family of deformations.

# A more affordable first step

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

To begin with, we consider the following more simple family of deformations.

## Remark

*In the sequel we will always assume that  $b_1(M) \geq 1$ .*

# A more affordable first step

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

To begin with, we consider the following more simple family of deformations.

## Remark

*In the sequel we will always assume that  $b_1(M) \geq 1$ .*

For sake of simplicity, assume that  $b_1(M) = 1$ . Let  $m \in \pi_1(M)$  such that  $[m]$  is a generator of  $H_1(M)/(\text{Tor } H_1(M)) \simeq \mathbb{Z}$ .

# A more affordable first step

$$\begin{aligned}\rho_n \otimes \chi_\zeta: \pi_1(M) &\rightarrow \text{SL}_n(\mathbb{C}) \otimes \mathbb{S}^1 \\ \gamma &\mapsto \rho_n(\gamma)\chi_\zeta(\gamma)\end{aligned}$$

We will consider the torsions of the twisted representations  $\text{tor}(M, \rho_n \otimes \zeta)$ .

# Twisted Alexander polynomials

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

There is a family of polynomials  $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$ , the  **$\rho_n$ -twisted Alexander polynomials**, that refine the construction of the Alexander polynomial for knots (Wada, Lin...)

# Twisted Alexander polynomials

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

There is a family of polynomials  $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$ , the  **$\rho_n$ -twisted Alexander polynomials**, that refine the construction of the Alexander polynomial for knots (Wada, Lin...)

These topological invariants have a (partially conjectural) strong detection power.

# Twisted Alexander polynomials

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

There is a family of polynomials  $\Delta_M^n(t) \in \mathbb{C}[t^{\pm 1}]$ , the  **$\rho_n$ -twisted Alexander polynomials**, that refine the construction of the Alexander polynomial for knots (Wada, Lin...)

These topological invariants have a (partially conjectural) strong detection power.

Our first result is the following:

**Theorem (BDHP '19)**

*For any  $\zeta$  on the unit circle  $\mathbb{S}^1$ ,*

$$|\Delta_M^n(\zeta)| = |\text{tor}(M, \rho_n \otimes \chi_\zeta)|.$$

*In particular, the polynomials  $\Delta_M^n$  have no roots on the unit circle.*

# A suggestive computation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Those polynomials satisfy a lot of nice symmetry properties. Among them, if  $\overline{M} \rightarrow M$  is a cyclic  $k$ -sheeted covering map then for any  $t$

$$\Delta_{\overline{M}}^n(t) = \prod_{\zeta^k=1} \Delta_M^n(\zeta t)$$

# A suggestive computation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Those polynomials satisfy a lot of nice symmetry properties. Among them, if  $\overline{M} \rightarrow M$  is a cyclic  $k$ -sheeted covering map then for any  $t$

$$\Delta_M^n(t) = \prod_{\zeta^k=1} \Delta_M^n(\zeta t)$$

Taking the log of the modulus,  $t=1$ ,  $k=2$

$$\log |\Delta_M^n(1)| = \log |\Delta_M^n(1)| + \log |\Delta_M^n(-1)|$$

# A suggestive computation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Those polynomials satisfy a lot of nice symmetry properties. Among them, if  $\overline{M} \rightarrow M$  is a cyclic  $k$ -sheeted covering map then for any  $t$

$$\Delta_{\overline{M}}^n(t) = \prod_{\zeta^k=1} \Delta_M^n(\zeta t)$$

Taking the log of the modulus,  $t=1$ ,  $k=2$

$$\log |\Delta_{\overline{M}}^n(1)| = \log |\Delta_M^n(1)| + \log |\Delta_M^n(-1)|$$

Replacing  $\Delta_{\overline{M}}^n(1)$  by  $\text{tor}(M, \rho_n)$  and dividing by  $n^2$

$$\frac{\log |\text{tor}(\overline{M}, \overline{\rho}_n)|}{n^2} = \frac{\log |\text{tor}(M, \rho_n)| + \log |\Delta_M^n(-1)|}{n^2}$$

# A suggestive computation

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Those polynomials satisfy a lot of nice symmetry properties. Among them, if  $\overline{M} \rightarrow M$  is a cyclic  $k$ -sheeted covering map then for any  $t$

$$\Delta_{\overline{M}}^n(t) = \prod_{\zeta^k=1} \Delta_M^n(\zeta t)$$

Taking the log of the modulus,  $t=1$ ,  $k=2$

$$\log |\Delta_{\overline{M}}^n(1)| = \log |\Delta_M^n(1)| + \log |\Delta_M^n(-1)|$$

$$\lim_{n \rightarrow \infty} \frac{\log |\Delta_M^n(\zeta)|}{n^2} = \frac{\text{Vol}(M)}{4\pi}$$

*uniformly in  $\zeta$ .*

# Cheeger–Müller theorem

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

As we said before, to prove this theorem we need to study the asymptotic of the Reidemeister torsions  $\text{tor}(M, \rho_n \otimes \chi_\zeta)$  as  $n$  goes to  $\infty$ .

# Cheeger–Müller theorem

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

As we said before, to prove this theorem we need to study the asymptotic of the Reidemeister torsions  $\text{tor}(M, \rho_n \otimes \chi_\zeta)$  as  $n$  goes to  $\infty$ . The key ingredient is the following theorem:

**Theorem (Cheeger '77, Müller '78, '91, Bismut–Zhang '91)**

*Let  $N$  be a compact (3-)manifold,  $\varrho: \pi_1(N) \rightarrow \text{GL}_n(\mathbb{C})$  a unimodular representation (i. e.  $|\det \rho(\gamma)| = 1$  for any  $\gamma$  in  $\pi_1(N)$ ).*

*Let  $T(M, E_\varrho)$  denote the **analytic torsion** of the flat bundle  $E_\varrho$  associated to  $\varrho$ . Then*

$$|\text{tor}(M, \varrho)| = T(M, E_\varrho).$$

# Idea of the proof: the analytic torsion.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

For the proof we assume that  $M$  is compact, so that we can use the Cheeger–Müller theorem: since  $\rho_n \otimes \chi_\zeta$  is unimodular, we are led to consider the sequence of analytic torsions

$$(T(M, E_{\rho_n \otimes \chi_\zeta}))_n.$$

# Idea of the proof: the analytic torsion.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

For the proof we assume that  $M$  is compact, so that we can use the Cheeger–Müller theorem: since  $\rho_n \otimes \chi_\zeta$  is unimodular, we are led to consider the sequence of analytic torsions

$$(T(M, E_{\rho_n \otimes \chi_\zeta}))_n.$$

- The flat vector bundle  $E_{\rho_n \otimes \chi_\zeta}$  is the quotient  $\mathbb{H}^3 \times_{\rho_n \otimes \chi_\zeta} \mathbb{C}^n$  of the trivial bundle of rank  $n$  on  $\mathbb{H}^3$  by the equivalence relation

$$(\tilde{x}, v) \sim (\gamma \cdot \tilde{x}, \rho_n \otimes \chi_\zeta(\gamma)v)$$

# Idea of the proof: the analytic torsion.

For the proof we assume that  $M$  is compact, so that we can use the Cheeger–Müller theorem: since  $\rho_n \otimes \chi_\zeta$  is unimodular, we are led to consider the sequence of analytic torsions

$$(T(M, E_{\rho_n \otimes \chi_\zeta}))_n.$$

- The flat vector bundle  $E_{\rho_n \otimes \chi_\zeta}$  is the quotient  $\mathbb{H}^3 \times_{\rho_n \otimes \chi_\zeta} \mathbb{C}^n$  of the trivial bundle of rank  $n$  on  $\mathbb{H}^3$  by the equivalence relation

$$(\tilde{x}, v) \sim (\gamma \cdot \tilde{x}, \rho_n \otimes \chi_\zeta(\gamma)v)$$

- An  $E_{\rho_n \otimes \chi_\zeta}$ -valued function (or differential form)  $f: M \rightarrow E_{\rho_n \otimes \chi_\zeta}$  is a  $\pi_1(M)$ -equivariant function  $f: \mathbb{H}^3 \rightarrow \mathbb{C}^n$ . We denote by  $\Omega^*(M, E_{\rho_n \otimes \chi_\zeta})$  the complex of  $E_{\rho_n \otimes \chi_\zeta}$ -valued differential forms on  $M$ .

## Idea of the proof: the analytic torsion 2.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

$$\Omega^0(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_0} \Omega^1(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_1} \Omega^2(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_2} \dots$$

## Idea of the proof: the analytic torsion 2.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

$$\Omega^0(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_0} \Omega^1(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_1} \Omega^2(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_2} \dots$$

Once again, we wish to compute the (analytic) torsion as

$$T(M, E_{\rho_n \otimes \chi_\zeta}) = \prod_i \det(d_i)^{(-1)^i}$$

## Idea of the proof: the analytic torsion 2.

Dubois, M.  
Heusener, J.  
Porti

$$\Omega^0(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_0} \Omega^1(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_1} \Omega^2(M, E_{\rho_n \otimes \chi_\zeta}) \xrightarrow{d_2} \dots$$

$\leftarrow \overline{\quad} \leftarrow$   
 $d_0^*$                        $d_1^*$                        $d_2^*$

The **Laplacian** is the operator

$$\Delta_k = d_{k-1} d_{k-1}^* + d_k^* d_k: \Omega^k(M, E_{\rho_n \otimes \chi_\zeta}) \rightarrow \Omega^k(M, E_{\rho_n \otimes \chi_\zeta}).$$

### Definition

The analytic torsion is defined as

$$T(M, E_{\rho_n \otimes \chi_\zeta}) = \prod_{k=0}^3 (\det \Delta_k)^{(-1)^k \frac{k}{2}}.$$

# Determinant and trace

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

But what is the meaning of  $\det \Delta$ ? The spectrum of the Laplacian consists of eigenvalues

$\{0 < \lambda_1 \leq \lambda_2 \leq \dots \leq \lambda_m \rightarrow +\infty\}$ . Formally, we write  $\log \det \Delta = \text{Tr} \log \Delta = \sum \log \lambda_m$  but the latter makes no sense.

# Determinant and trace

Asymptotic of  
twisted  
polynomials

$$\int_0^\infty e^{-t\lambda} t^{s-1} dt = \lambda^{-s} \Gamma(s)$$

with  $\Gamma(s)$  the gamma-function (meromorphic, with simple pole at 0). The candidate for  $\log \det \Delta$  is

$$-\frac{d}{ds} \left( \frac{\int_0^\infty \sum_m e^{-t\lambda_m} t^{s-1} dt}{\Gamma(s)} \right) \Big|_{s=0}$$

# The heat operator

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We have just seen that to make sense of the determinant of the Laplace operator  $\det \Delta$ , one needs to study the sum  $\sum_m e^{-t\lambda_m}$ , which is the trace of the heat operator  $e^{-t\Delta}$  (and is well-defined for any  $t > 0$ ).

# The heat operator

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We have just seen that to make sense of the determinant of the Laplace operator  $\det \Delta$ , one needs to study the sum  $\sum_m e^{-t\lambda_m}$ , which is the trace of the heat operator  $e^{-t\Delta}$  (and is well-defined for any  $t > 0$ ).

Denoting  $(\Delta^n)_n$  for the family of Laplacians acting of forms valued in the family of bundles  $(E_{\rho_n \otimes \chi_\zeta})_n$ , we need to study the asymptotic behavior of the heat traces of this family as  $n$  goes to infinity.

Denoting  $(\Delta^n)_n$  for the family of Laplacians acting of forms valued in the family of bundles  $(E_{\rho_n \otimes \chi_\zeta})_n$ , we need to study the asymptotic behavior of the heat traces of this family as  $n$  goes to infinity.

Since the Laplacians operators are equivariant under the action of  $\pi_1(M)$ , we can decompose the heat traces on translated of a fundamental domain  $\mathcal{F} \subset \mathbb{H}^3$  for  $M$ :

$$\mathrm{Tr} e^{-t\Delta^n} = \sum_{[\gamma] \in [\pi_1(M)]} \chi_\zeta(\gamma) \int_{\mathcal{F}} h_t^n(\tilde{x}, \gamma \cdot \tilde{x})$$

# Ruelle zeta functions

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

After (many) more computations, one obtains the formula:

$$\log T(M, E_{\rho_n \otimes \chi_\zeta}) = \frac{n^2 \text{Vol}(M)}{4\pi} - \sum_{k=1}^n \sum_{[\gamma] \neq 1} \log \left| 1 - \chi_\zeta(\gamma) e^{-\frac{k\lambda(\gamma)}{2}} \right| \quad (1)$$

where  $\lambda(\gamma)$  is the complex length of  $\gamma$

$$\text{i.e. } \rho(\gamma) \sim \begin{pmatrix} e^{\lambda(\gamma)/2} & 0 \\ 0 & e^{-\lambda(\gamma)/2} \end{pmatrix}.$$

# Ruelle zeta functions

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

After (many) more computations, one obtains the formula:

$$\log T(M, E_{\rho_n \otimes \chi_\zeta}) = \frac{n^2 \text{Vol}(M)}{4\pi} - \sum_{k=1}^n \sum_{[\gamma] \neq 1} \log \left| 1 - \chi_\zeta(\gamma) e^{-\frac{k\lambda(\gamma)}{2}} \right| \quad (1)$$

where  $\lambda(\gamma)$  is the complex length of  $\gamma$

i.e.  $\rho(\gamma) \sim \begin{pmatrix} e^{\lambda(\gamma)/2} & 0 \\ 0 & e^{-\lambda(\gamma)/2} \end{pmatrix}$ .

The last series is known as a **Ruelle zeta function**, and part of the computations goes through a proof of **Fried theorem**, which relates those Ruelle zeta functions with the analytic torsion.

The last series is known as a **Ruelle zeta function**, and part of the computations goes through a proof of **Fried theorem**, which relates those Ruelle zeta functions with the analytic torsion.

The end of the proof deals with the convergence of the above sum as  $n$  goes to  $\infty$ . The delicate points are uniformity of the convergence.

- To go to the non-compact case, one approximates the manifold  $M$  by a sequence a compact manifolds  $M_p$ , and one needs uniformity in  $p$  in (1).

- To go to the non-compact case, one approximates the manifold  $M$  by a sequence a compact manifolds  $M_p$ , and one needs uniformity in  $p$  in (1).
- We also want uniformity in  $\zeta$ .

- To go to the non-compact case, one approximates the manifold  $M$  by a sequence of compact manifolds  $M_p$ , and one needs uniformity in  $p$  in (1).
- We also want uniformity in  $\zeta$ .
- Dividing by  $n^2$  and taking the limit finishes the proof.

# A dynamical application of our first theorem

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

Assume that  $M$  is **fibred**:  $M = \Sigma \times [0, 1] / (x, 0) \sim (\phi(x), 1)$   
for some surface  $\Sigma$  and some diffeomorphism  $\phi: \Sigma \rightarrow \Sigma$ , called  
the monodromy.

In other words,  $[\rho_{n,\Sigma}]$  is a fixed point for the action of  $\phi$  on the character variety of  $\Sigma$ .

We prove the following:

## Theorem (BDHP'19)

*The action of the monodromy  $\phi$  on  $[\rho_{n,\Sigma}]$  has hyperbolic dynamic. Namely its tangent map has no eigenvalues of modulus one.*

# About the proof

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety  $X(\Sigma)$  naturally identifies with the first twisted cohomology group

$$T_{[\rho_{n,\Sigma}]}X(\Sigma) \simeq H^1(\Sigma, \text{Ad} \circ \rho_{n,\Sigma})$$

# About the proof

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety  $X(\Sigma)$  naturally identifies with the first twisted cohomology group

$$T_{[\rho_{n,\Sigma}]}X(\Sigma) \simeq H^1(\Sigma, \text{Ad} \circ \rho_{n,\Sigma})$$

What we prove is indeed a refinement of the theorem of Weil:

## Proposition (BDHP'19)

*The tangent map of  $\phi$  acting on  $[\rho_{n,\Sigma}]$  has characteristic polynomial equal to the twisted Alexander polynomial.*

# About the proof

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

The proof comes from the following well-known fact theorem (due to Weyl): the tangent space of the character variety  $X(\Sigma)$  naturally identifies with the first twisted cohomology group

$$T_{[\rho_{n,\Sigma}]}X(\Sigma) \simeq H^1(\Sigma, \text{Ad} \circ \rho_{n,\Sigma})$$

What we prove is indeed a refinement of the theorem of Weil:

## Proposition (BDHP'19)

*The tangent map of  $\phi$  acting on  $[\rho_{n,\Sigma}]$  has characteristic polynomial equal to the twisted Alexander polynomial.*

We conclude with our first theorem.

# An application of the main theorem.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We define the **Mahler measure** of a polynomial  $P$  as

$$m(P) = \frac{1}{2\pi} \int_0^1 \log |P(e^{i\theta})| d\theta.$$

# An application of the main theorem.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We define the **Mahler measure** of a polynomial  $P$  as

$$m(P) = \frac{1}{2\pi} \int_0^1 \log |P(e^{i\theta})| d\theta.$$

Jensen's formula relates the Mahler measure with the roots of  $P$ :

$$m(P) = \sum_{\substack{P(\zeta)=0 \\ |\zeta|>1}} \log |\zeta|$$

# An application of the main theorem.

Asymptotic of  
twisted  
polynomials

L. Benard, J.  
Dubois, M.  
Heusener, J.  
Porti

We define the **Mahler measure** of a polynomial  $P$  as

$$m(P) = \frac{1}{2\pi} \int_0^1 \log |P(e^{i\theta})| d\theta.$$

Jensen's formula relates the Mahler measure with the roots of  $P$ :

$$m(P) = \sum_{\substack{P(\zeta)=0 \\ |\zeta|>1}} \log |\zeta|$$

We obtain

**Theorem (BDHP'19)**

$$\lim_{n \rightarrow \infty} \frac{m(\Delta_M^n)}{n^2} = \frac{\text{Vol}(M)}{4\pi}$$
